PROFESSIONAL LEARNING REPORT

Agile, Scrum Mastery & AI-Augmented Facilitation

Prepared for	Raman Bhargav
Reporting Period	September 2026
Focus Area	Scrum Mastery and AI-Enabled Agile Practice
Courses Completed	2 (see summary table below)

1. Executive Summary

This report documents two professional development courses completed in September 2026, both centred on Agile delivery and the Scrum Master role. The first, the Scrum Master Training Program delivered through Infosys Springboard, builds a structured foundation in Scrum theory, roles, events, and artifacts. The second, ChatGPT for Scrum Masters: AI in Agile Practice on Udemy, extends that foundation into a practical, modern skill set: using generative AI and prompt engineering to support day-to-day Scrum Master responsibilities such as facilitation, coaching, stakeholder communication, and backlog refinement.

Together, the two courses represent a deliberate learning path — first consolidating core Agile/Scrum competence, then layering on an emerging, high-leverage skill (AI-assisted facilitation) that is increasingly relevant to how Scrum Masters and Agile coaches operate in 2026. This report summarises the content of each course, the specific competencies gained, and how they apply to ongoing Agile delivery work, and closes with recommended next steps for continued development.

2. Summary of Courses Completed

Course	Provider	Completion Date	Duration
Scrum Master Training Program	Infosys Springboard	Sept 7, 2026	Self-paced
ChatGPT for Scrum Masters: AI in Agile Practice	Udemy (Instructor: Mirko Perkusich, Ph.D.)	Sept 7, 2026	4.5 hours

3. Course 1 — Scrum Master Training Program

Provider: Infosys Springboard | Completed: September 7, 2026

3.1 Course Overview

Infosys Springboard is Infosys's digital learning and reskilling platform, delivering structured content on Agile methodology alongside broader digital, professional, and behavioural skills. Its Scrum Master track is designed to give learners a working command of the Scrum framework — the roles, events, and artifacts that structure iterative software delivery — and is built to reflect how Agile is actually practised on live Infosys delivery engagements.

3.2 Key Topics Covered

- Foundations of Agile values and principles, and how they differ from traditional waterfall project management
- The three Scrum roles — Scrum Master, Product Owner, and Development Team — and their respective accountabilities
- Scrum events: Sprint Planning, Daily Scrum, Sprint Review, and Sprint Retrospective, including facilitation techniques for each
- Scrum artifacts: Product Backlog, Sprint Backlog, and the Increment, and how they support transparency and inspection
- Backlog management and estimation techniques for translating requirements into actionable sprint work
- Agile metrics such as velocity and burndown tracking, used to monitor sprint health and team performance
- Impediment identification and removal — a core Scrum Master responsibility for keeping delivery unblocked

3.3 Skills and Competencies Gained

- Ability to run and facilitate the full cycle of Scrum ceremonies with a clear structural understanding of each event's purpose
- Practical grounding in backlog refinement and sprint planning that can be applied directly to live projects
- A shared vocabulary and framework for collaborating with Product Owners, developers, and stakeholders on Agile teams
- Foundation knowledge that aligns with recognised Scrum certification bodies (e.g. Scrum.org, Scrum Alliance), supporting future certification pursuits

4. Course 2 — ChatGPT for Scrum Masters: AI in Agile Practice

Provider: Udemy | Instructors: Mirko Perkusich, Ph.D. and Letícia de Sousa Coelho | Completed: September 7, 2026 | Length: 4.5 hours

4.1 Course Overview

This course moves beyond Scrum theory into a practical, contemporary skill: applying ChatGPT and prompt engineering directly to the Scrum Master's day-to-day responsibilities. Rather than a generic introduction to ChatGPT, the course is purpose-built for Agile practitioners, teaching how AI can support facilitation, coaching, stakeholder communication, and decision-making without replacing the judgement the role requires.

4.2 Key Topics Covered

- Prompt patterns tailored specifically to Scrum Master activities: facilitation, coaching, and conflict management
- Using ChatGPT to support decision-making, stakeholder communication, and backlog refinement
- Techniques for avoiding common mistakes and hallucinations when relying on AI output in a delivery context
- Adapting prompts to different team contexts and dynamics with minimal rework
- Applying AI support across the Scrum event cycle — Sprint Planning, Daily Scrum, Review, and Retrospective

4.3 Skills and Competencies Gained

- Working knowledge of prompt engineering as applied to Agile facilitation and coaching scenarios
- Ability to critically evaluate AI-generated suggestions rather than accepting them uncritically, reducing the risk of AI hallucination in team-facing communication
- A practical toolkit for using AI to draft retrospective prompts, stakeholder updates, and backlog language more efficiently
- Increased confidence and autonomy in incorporating AI tools into daily Scrum Master workflows

5. Integrated Learning Outcomes

Taken together, these two courses form a coherent progression: the Infosys Springboard course establishes the structural and theoretical foundation of Scrum, while the Udemy course builds a modern, AI-augmented layer of practical facilitation skill on top of it. The combination reflects a well-rounded approach to the Scrum Master role — one grounded in the Scrum framework itself, and enhanced by fluency with the AI tools now shaping how Agile teams communicate, plan, and reflect.

5.1 Consolidated Skill Set

- End-to-end command of Scrum roles, events, and artifacts
- Sprint planning, backlog refinement, and estimation practice
- Facilitation and impediment-removal techniques for keeping teams unblocked
- AI-assisted prompt engineering for facilitation, coaching, and stakeholder communication
- Critical evaluation of AI output to avoid over-reliance or hallucinated guidance

6. Application to Ongoing Work

- Apply structured Scrum ceremony facilitation techniques to current or upcoming sprint cycles
- Use AI-assisted prompts to prepare retrospective formats, sprint review summaries, and stakeholder status updates more efficiently
- Introduce lightweight AI-supported drafting into backlog refinement sessions while retaining final judgement on prioritisation
- Share prompt patterns and facilitation techniques with peer Scrum Masters or Agile teams as a light knowledge-transfer session

7. Recommended Next Steps

- Pursue a recognised Scrum certification (e.g. Professional Scrum Master I, Certified ScrumMaster) to formalise the foundational knowledge gained
- Explore intermediate courses on AI for Agile/Project Leadership to deepen the AI-augmented skill set
- Pilot one or two AI-assisted facilitation techniques in a live sprint and gather team feedback
- Continue tracking Agile metrics (velocity, burndown) to measure the practical impact of newly acquired facilitation skills

8. Certificates

The following certificates evidence completion of the courses referenced in this report:

- Scrum Master Training Program — Infosys Springboard, issued September 8, 2026 (verifiable via QR code at verify.onwingspan.com)
- ChatGPT for Scrum Masters: AI in Agile Practice — Udemy, Certificate No. UC-adedb6e9-fb02-4069-841f-41330415cb26
